DIAGNOSIS or SYMPTOMS (Reason for this Exam)

Have you ever had X-Ray Contrast (Dye) injected before?

Yes No

Are you pregnant?

Yes No Unsure LMP Date

In order to perform the exam your physician has requested, you will be given an injection of contrast containing gadolinium-related products. The contrast does NOT contain iodine. The contrast allows the radiologist to better visualize the area of study.

Gadolinium based contrast media is considered very safe. Any injection carries slight risk of harm including injury to a nerve, artery or vein, infection, or reaction to the contrast being injected. Rarely, a patient will have a mild reaction to the contrast agent and develop sneezing or hives. Uncommonly a serious reaction occurs. The physicians and staff are trained to treat these reactions. Very rarely death has occurred related to contrast administration. A YES answer to any of the questions below does not mean that you will get a contrast reaction as the overwhelming majority of all patients do not.

The greatest risk is a metallic flying object through the air toward the magnet and hitting you. To reduce this risk we require that all people involved with the study remove all metal from their clothing and all metal objects from their pockets. No metal objects are allowed to be brought into the magnet room at any time. In addition, once you are in the magnet, the door to the room will be closed so that no one inadvertently walks into the magnet.

If you have any questions about the contrast agent, risks, reactions, or the procedure itself, please ask the x-ray technologist or the physician.

Did you have any of the following reactions after a prior contrast injection?

Rash or hives	Fainting	Medical Treatment Required
Shortness of Breath	Flushing	No Problems
Wheezing	Low Blood Pressure	Other

Food Allergies: Shellfish None Other

Drug Allergies: Iodine Antibiotics Other

I UNDERSTAND AND ACCEPT THE RISKS OF THE CONTRAST Yes No
